Experiment No. 1

Generation and Classification of Continuous-Time and Discrete-Time Signals

OBJECTIVE 1:

To generate and visualize basic continuous-time signals such as unit step, unit impulse, ramp, sinusoidal, and exponential signals

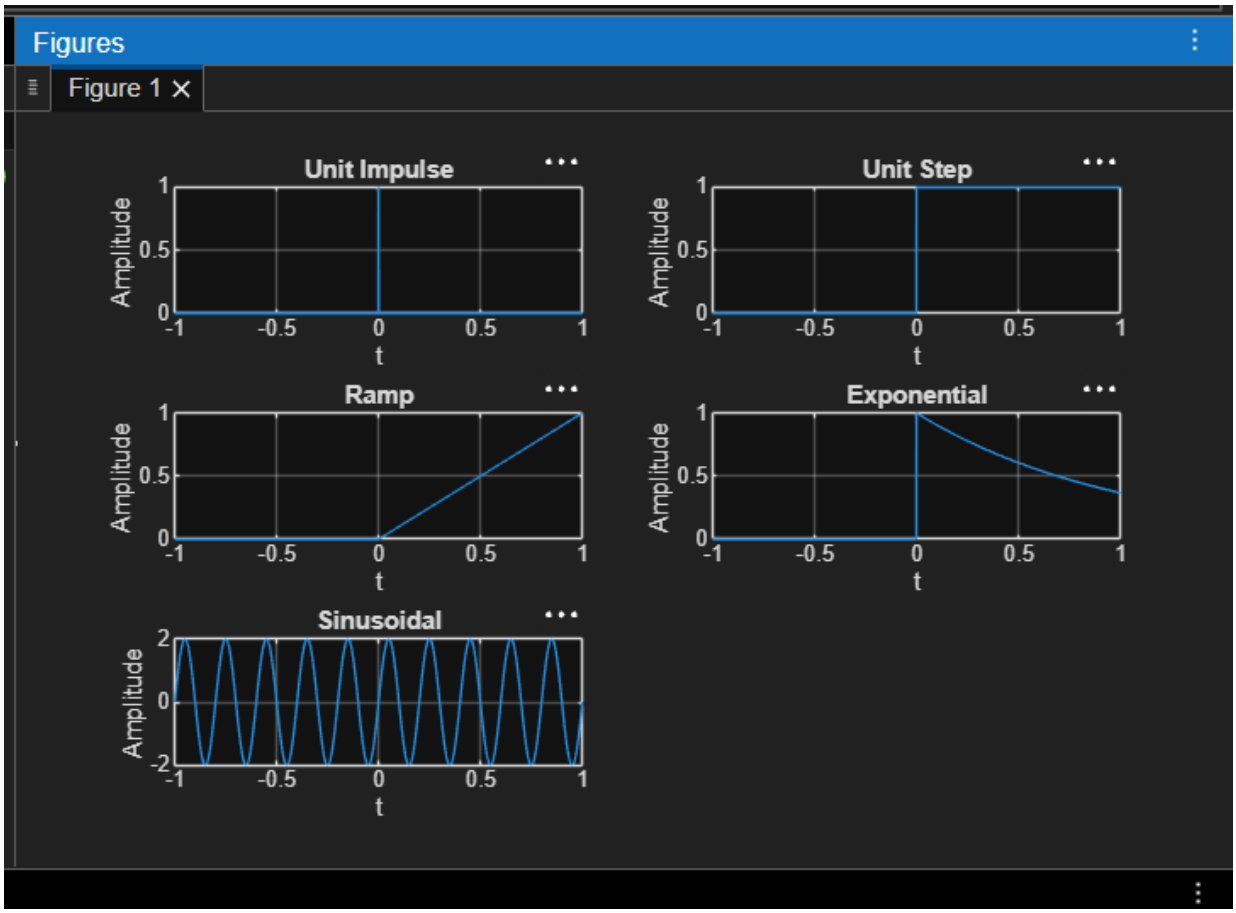

Procedure:

1. Define a continuous time vector with a sufficiently small simulation interval.
2. Generate unit impulse, unit step, ramp, exponential and sinusoidal signals.
3. Plot each waveform against time using suitable amplitude and time scales.
4. Measure amplitude, frequency and period wherever applicable.
5. Compare the simulated waveform with its theoretical expression.
6. Record observations and justify the signal characteristics.

MATLAB CODE:

```
% Experiment 1.1: Generation of Continuous-Time Signals
clc; clear; close all;
t = -1:0.001:1;
A = 2; f0 = 5; a = 1;
imp = double(abs(t)<0.0005);
step = double(t>=0);
ramp = t.*step;
expSig = exp(-a*t).*step;
sinSig = A*sin(2*pi*f0*t);
figure;
subplot(3,2,1); plot(t,imp); grid on; title('Unit Impulse'); xlabel('t'); ylabel('Amplitude');
subplot(3,2,2); plot(t,step); grid on; title('Unit Step'); xlabel('t'); ylabel('Amplitude');
subplot(3,2,3); plot(t,ramp); grid on; title('Ramp'); xlabel('t'); ylabel('Amplitude');
subplot(3,2,4); plot(t,expSig); grid on; title('Exponential'); xlabel('t'); ylabel('Amplitude');
subplot(3,2,5); plot(t,sinSig); grid on; title('Sinusoidal'); xlabel('t'); ylabel('Amplitude')
```

OUTPUT:

RESULT:

This test case validates that the signal generator can produce a sinusoidal waveform with the specified frequency, amplitude, and phase shift.

OBJECTIVE 2:

To generate and visualize basic discrete-time signals and analyze their amplitude and time-index characteristics.

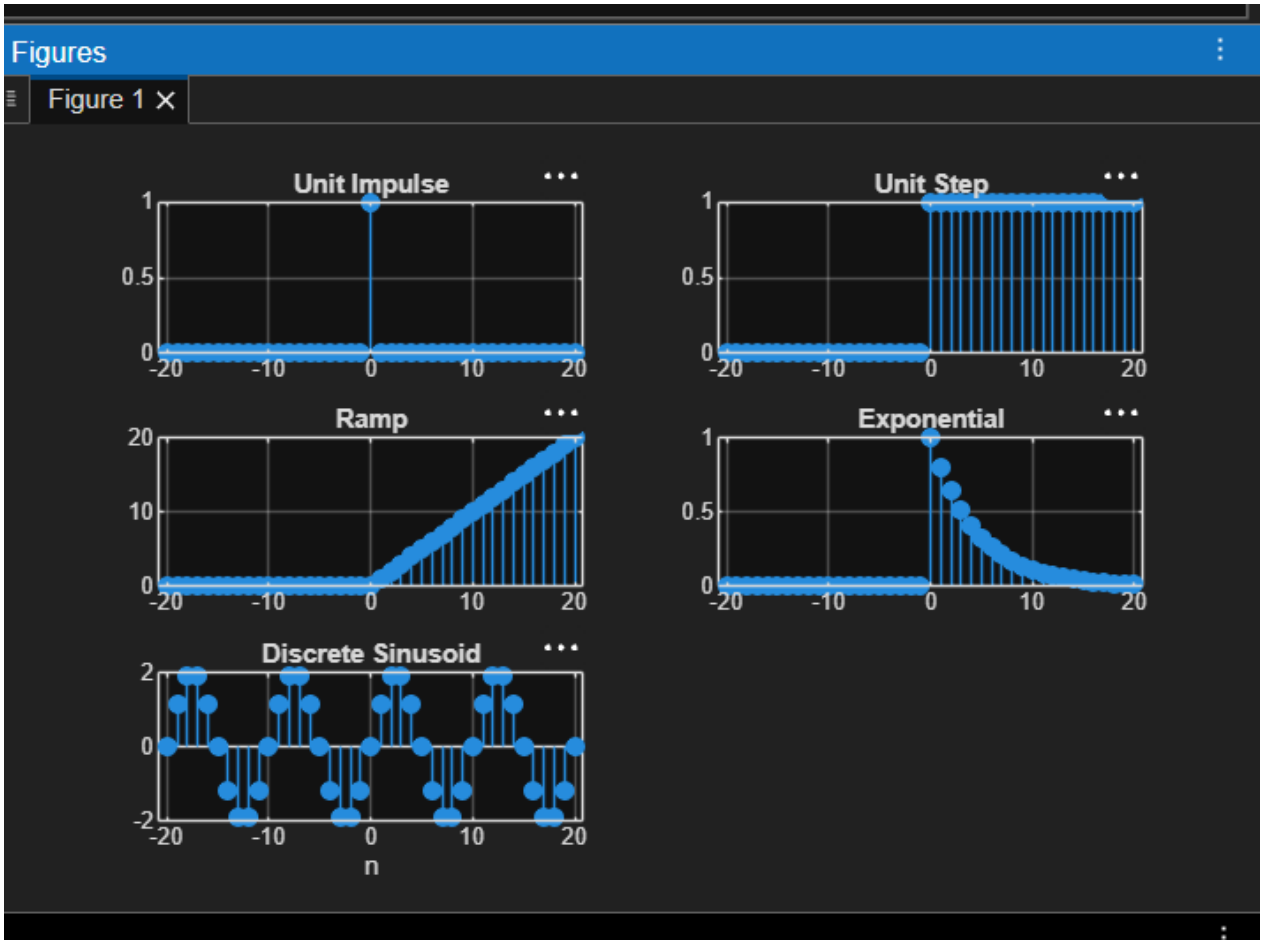

Procedure

1. Define the integer sample index n.
2. Generate unit impulse, unit step, ramp, exponential and sinusoidal sequences.
3. Display each sequence using a stem plot.
4. Determine sample amplitudes and period where applicable.
5. Classify the sequence as periodic/non-periodic and even/odd wherever applicable.
6. Compare the generated samples with theoretical values and record observations.

MATLAB Coding

```
% Experiment 1.2: Generation of Discrete-Time Signals
clc; clear; close all;
n = -20:20;
A = 2; f0 = 0.1; a = 0.1;
imp = double(n==0);
step = double(n>=0);
ramp = n.*step;
expSig = (0.8).^n .* step;
sinSig = A*sin(2*pi*f0*n);
figure;
subplot(3,2,1); stem(n,imp,'filled'); grid on; title('Unit Impulse');
subplot(3,2,2); stem(n,step,'filled'); grid on; title('Unit Step');
subplot(3,2,3); stem(n,ramp,'filled'); grid on; title('Ramp');
subplot(3,2,4); stem(n,expSig,'filled'); grid on; title('Exponential');
subplot(3,2,5); stem(n,sinSig,'filled'); grid on; title('Discrete Sinusoid');
xlabel('n');
```

OUTPUT:

RESULT:

This test case validates that the signal generator can accurately produce a discrete-time unit impulse signal at a specified index, which is essential for analyzing the response of discrete time systems.

Objective	Assessment Criterion	Excellent – 4	Good – 3	Satisfactory – 2	Needs Improvement – 1	Weightage	Marks(10)	Marks obtained
1. Generate and visualize basic continuous-time signals such as unit step, unit impulse, ramp, sinusoidal and exponential.	**CT Signal Generation & MATLAB Implementation**	Generates all five CT signals accurately with a suitable time vector and step size. Uses correct MATLAB commands . Plots are correctly scaled, with titles, axis labels and grid.	Generates the required CT signals and plots correctly, with minor errors in code, time range, parameters or labelling.	Generates basic CT signals but has noticeable errors in code, step or impulse representation, or plots, and needs assistance.	Unable to generate the required CT signals or produce meaningful plots.	**25**	**2.5**	
2. Generate and visualize basic discrete-time signals such as unit sample, unit step, ramp, sinusoidal and exponential sequences.	**DT Signal Generation & MATLAB Implementation**	Generates all five DT sequences accurately with a proper index vector n. Uses stem correctly. Plots are correctly scaled, with titles, axis labels and grid.	Generates the required DT sequences and plots correctly, with minor errors in index range, stem usage, parameters or labelling.	Generates basic DT sequences but has noticeable errors in code, indexing or stem plots, and needs assistance.	Unable to generate the required DT sequences or produce meaningful stem plots.	**25**	**2.5**	
3. Classify CT and DT signals as periodic or aperiodic and identify their waveform characteristics.	**Signal Classification & Periodicity Analysis**	Correctly classifies all signals using DT. Determines the period where applicable. Identifies frequency, phase, and growth or decay. Explains the	Classifies most signals correctly and finds most periods, with minor errors or limited justification.	Gives basic classifications . Period calculation or justification is incomplete and needs guidance.	Unable to classify the signals correctly or justify the classification .	**25**	**2.5**	

		reasoning clearly with mathematical conditions and waveform evidence.						
4. Analyze the amplitude and time-index characteristics of discrete-time signals.	**Amplitude & Time-Index Analysis**	Correctly determines maximum and minimum amplitude, the index n at which each occurs, and signal energy. Correctly shows the effect of time shifting and folding on the index. Interprets the results clearly.	Analyzes most amplitude and index characteristics correctly, with minor errors in values or interpretation.	Gives basic amplitude and index analysis with noticeable errors, and needs guidance.	Unable to analyze the amplitude and time-index characteristics or interpret the results.	**25**	**2.5**
